# Storage networking choices

- Broad division of blocks and files
- Application platforms drive default choices
- Technology trends emerging to upset current approaches to deployment

# NFS play

- Scalable services
- Traditional home directories
- Lower TCO because of TCP/IP
- Database deployments and encroachment in enterprise apps

**N I C

# Wrenches and wildcards

- Cost
- Customer perception of NAS, acceptance of SAN (actually SCSI)
- Emergence of iSCSI providing lower TCO for blocks (the selling point for NAS)
- RDMA emergence and technologies like DAFS

C  
E**

# Economics

- Acceptable downtime is application dependent
- Simplest – but most costly - approach is full mirror online
- Damn those ATA drives are cheap

**NFS  
INDUSTRY  
CONFERENCE**

# Emerging Storage Hierarchy

Y N  
C  
E**

# NFS Version 4 obstacles

- Customer perception is primary obstacle to further deployment
- Vendor investment in high performance, high reliability NFS is inadequate
- NFS manageability is wanting (say AFS – but don't leap far)
- Repeat of implementation problems?

**N I C

# Investment in NAS

TPC-C submissions:

- Bull
- Dell
- Fujitsu
- Fujitsu Siemens
- HP
- IBM
- NEC
- Network Appliance**
- Sun
- Unisys

The only NAS result - DAFS

**N I C  
F N O  
S D N  
U S F  
T R E  
R Y N  
C E**

**DAFS is the highest performance NAS sol'n available today.**

**NFS Version 4 introduction will not change this.**

R E  
Y N  
C  
E**

# Management

- Storage hierarchy not completely solved in initial work
- Common global naming not defined by protocol
- Integration with data recovery tools lagging

**N I C  
F N O  
S D N  
U S F  
T R E  
R Y R  
E N  
C E**

# NFS Version 4 promise

- Ubiquitous secure, scalable NAS
- Strong open standard, defined process for managed evolution
- Traction in implementations, investment in open source references
- Industry and research investment to ensure feature delivery
